**Project:** To-Do List API **CR ID:** CR-001 — Optimistic Locking **All statuses below are initial. No test has been executed.**

| Test ID | Requirement ID | Test Scenario | Expected Result | Status |
|---|---|---|---|---|
| TC-001-01 | FR-02 | Create a task, inspect the response | Response includes a `version` field (initial value, e.g. `0`) | Not Executed |
| TC-001-02 | FR-02 | Get a task by id | Response includes current `version` | Not Executed |
| TC-001-03 | FR-02 | List tasks | Every item in the page includes `version` | Not Executed |
| TC-001-04 | FR-03, FR-05 | Update a task with the correct current `expectedVersion` | `200 OK`; returned `version` is incremented by exactly 1; fields updated as submitted | Not Executed |
| TC-001-05 | FR-04 | Update a task with a stale (outdated) `expectedVersion` | `409 Conflict`; task's stored data unchanged | Not Executed |
| TC-001-06 | FR-03 | Update a task with `expectedVersion` omitted entirely | `400 Bad Request` | Not Executed |
| TC-001-07 | FR-04, FR-06 | Inspect the `409` response body for a stale update | Body follows the project's standard `ErrorResponse` shape (`timestamp`, `status`, `error`, `message`, `path`) and the message references a version conflict | Not Executed |
| TC-001-08 | FR-04 | After a rejected stale update, re-fetch the task and retry with the current version | Retry succeeds; `200 OK`; version increments by 1 from its post-conflict value | Not Executed |
| TC-001-09 | FR-05 | Perform three sequential successful updates on the same task | Version increases by exactly 1 each time (e.g. `1 → 2 → 3 → 4`) | Not Executed |
| TC-001-10 | FR-07 | Inspect a task created before this change was deployed (regression / migration check) | Task has a valid, non-null `version` and can be updated successfully using it | Not Executed |
| TC-001-11 | FR-01, FR-04 | **Concurrency:** fire two update requests for the same task at the same time, both submitting the same (currently valid) `expectedVersion`, with different field changes | Exactly one request returns `200 OK` and applies its change; the other returns `409 Conflict`; final task state reflects only the winning request | Not Executed |
| TC-001-12 | — (regression) | Run the existing Playwright `tasks.spec.ts` and `categories.spec.ts` suites unmodified | All existing test cases continue to pass; no existing endpoint contract is broken by the addition of the `version` field | Not Executed |

## Notes

- TC-001-11 requires two near-simultaneous requests (e.g. via parallel HTTP calls in the test runner) rather than two sequential calls, to validate genuine concurrent-write behavior, not just stale-read behavior (already covered by TC-001-05).
- TC-001-10 should be run against a database that already contains rows created prior to this CR's deployment, to validate the migration approach documented in `TECHNICAL_DESIGN.md` §4.
