Project: To-Do List API **CR ID:** CR-004 — Audit Trail **All statuses below are initial. No test has been executed.**

Test ID	Requirement ID	Test Scenario	Expected Result	Status
TC-004-01	FR-01	Create a new task	Exactly one `CREATE` audit entry exists for it, with `oldValues = null` and `newValues` matching the created task	Not Executed
TC-004-02	FR-02	Update a task's status	Exactly one `UPDATE` audit entry is added, with `oldValues.status` = previous status and `newValues.status` = new status	Not Executed
TC-004-03	FR-02	Update multiple fields of a task in one `PUT` (e.g. status and dueDate)	A single `UPDATE` entry captures both changed fields' old and new values	Not Executed
TC-004-04	FR-03	Delete a task	Exactly one `DELETE` audit entry is added, with `oldValues` matching the task's state just before deletion and `newValues = null`	Not Executed
TC-004-05	FR-04	Inspect any audit entry	Entry includes `taskId`, `operation`, `occurredAt` (timestamp), and a non-null `actor`	Not Executed
TC-004-06	FR-05	Delete a task that has prior `CREATE` / `UPDATE` history, then request its audit history	`GET /api/tasks/{id}/audit` still returns `200 OK` with the full history, including entries from before the deletion	Not Executed
TC-004-07	FR-06	Force the underlying update to fail after the audit call would normally run (e.g. a constraint violation)	Transaction rolls back entirely; no audit entry is persisted for the failed operation	Not Executed
TC-004-08	FR-07	Create, update (status), then update (due date) the same task, then request its audit history	Three entries are returned in chronological order: `CREATE`, then the two `UPDATE`s	Not Executed
TC-004-09	FR-07	Request audit history for a task id that has never existed	`404 Not Found`	Not Executed
TC-004-10	FR-08	Attempt to find any API endpoint that writes directly to `TASK_AUDIT`	No such endpoint exists — audit entries can only be produced as a side effect of `Task` create/update/delete	Not Executed
TC-004-11	— (required scenario)	Full scenario from `CHANGE_REQUEST.md` §3: create (TODO) → update status (IN_PROGRESS) → update due date	Audit history shows exactly three chronological entries matching each step, with correct old/new values at each	Not Executed
TC-004-12	— (regression)	Run the existing Playwright `tasks.spec.ts` suite unmodified	All existing test cases continue to pass; task create/update/delete response shapes are unchanged by the addition of auditing	Not Executed

Notes

- TC-004-07 should target a constraint that fails *after* the point where the audit call would normally execute within the method (e.g. a concurrent unique-constraint violation on a related write), to genuinely validate rollback behavior rather than a failure that occurs before any audit logic runs.
